

ARTIFICIAL SNOW

Fire Rated to Source 1 BS5852

*Realistic, harmless snow –
ideal for special effects and theming*

The best artificial snow around, our snow achieves an amazing resemblance to the real thing by producing a carefully selected and treated copolymer film, which is shredded to produce flakes of a similar size, density, colour and opacity to those of real snow.

The product provides a unique and highly impressive way of simulating falling, fallen or drifted snow and is totally harmless to clothing and furniture.

***And, what's more, our snow complies with Source 1 of BS5852:1990
(as tested by Warrington Fire Research)***

Use it for stage, studio, window dressing or Christmas grotto theming or in conjunction with snow machines or wind machines to give you a controlled snowfall – anything from a gentle sprinkling to a blizzard!

Show Snow is available in 4 kilo (58 litre) heavy duty, heat sealed plastic sacks (equivalent to a fully stuffed pillowcase, giving a coverage of approximately 10 square metres to a depth of 4mm).

And of course, buying from us online, [you save £s!](#)

	NUMBER OF BAGS	1-10	11-20	21+
