

TerraFog™ is a patented design and was brought about by a desire from the nightclub market to have a high powered smoke effect to simulate the large liquid nitrogen fog cannons seen in some of the Super clubs of Ibiza and Florida but at a fraction of the cost!

TerraFog™ uses one or two Le Maitre G300 smoke machines to give a visual effect. It also uses carbon dioxide for the cooling effect, compressed air or nitrogen for the pneumatics and special fog fluid to ensure the effect disappears quickly. The combination of these things gives a very large blast of cold fog that can be blasted upwards, down on to the audience or across a stage in a matter of seconds!

This product is also useful to simulate rocket blasts or explosions in theme parks as well as for reveals on stage, etc.

There are four standard models available (TF-3, TF-6, TF-8 and TF-9). These come flight cased and with the smoke machines included, although no smoke fluid is included as this needs to be ordered separately.

The models are effectively grouped by output, i.e. volume of air they fire.

**The TerraFog™ comes with:**

- 1 x Flight cased system
- 1 x G300 smoke machine with DMX controller
- 1 x 5m carbon dioxide supply hose
- 1 x Adaptor from CO2 bottle to hose
- 1 x 5m Pneumatic hose

Specification:

1220 (length) x 600 (width) x 765 mm (height)
Weight: 90 kg
DMX control

Comes fully flight cased and ready to roll!
